

Cancer and Disturbance Zones - how you can protect yourself

Cancer and Disturbance Zones

- Distinct statistical relationships between subterranean water courses, electrosmog and cancer have been documented and evidenced in many studies by health professionals and scientists. A medical "cancer prevention", that first begins when the tumor can be noticeable or palpable, does not deserve this name. Stress from disturbance zones can be diagnosed in detail using diagnostic medical equipment. In this way, stress caused by disturbance fields can be recognized at an early stage.
- It can be evidenced that on geopathic zones, the air ionization is increased by a factor of 100. Ionized air is undisputed as a causer of sickness. If a sleeping place is located upon such a zone, the sleeping person is bombarded with highly charged atomic particles night after night, which destroy the sleeper's somatic cells.
- Case studies by Kessler-Kopschina and Hanspeter Kobbe prove that after reorganizing a location no new metastases occur and ailments subside. If a sleeping place is located at such zones, the health implications can be devastating. The cell divisions occur irregularly and large quantities of defected cells are produced. Thereby a process begins, which at a certain stage can no longer be stopped: disorder-ervation-sickness-premature death.

It begins apparently harmless

- Light head or limb-aches, migraines, constant fatigue especially in the morning, stiff limbs and tension upon rising and sleeping disorder without identifiable reasons are all indicators to be taken seriously.
- Frequent occurrence of heart rhythm disturbances, tinnitus, diabetes, allergies, rheumatic sicknesses, thyroid and pancreatic gland problems, neurodermatitis, metabolic disorders as well as hyperactivity in children.
- These and other symptoms can be first indications of a sleeping place that is already exposed to a geopathic zone. Geopathic zones are not medically diagnosed. Instead, symptoms are cured; the cause of the sickness is not however recognized and removed. This has the result that the ailment continuously worsens. Excessive operations follow and the body is poisoned by medication. There is unending suffering from illnesses, physical, psychic, financial and social burdens. Some patients' ordeals are dreadful. All of these are avoidable by careful site examination.

Literature Recommendations

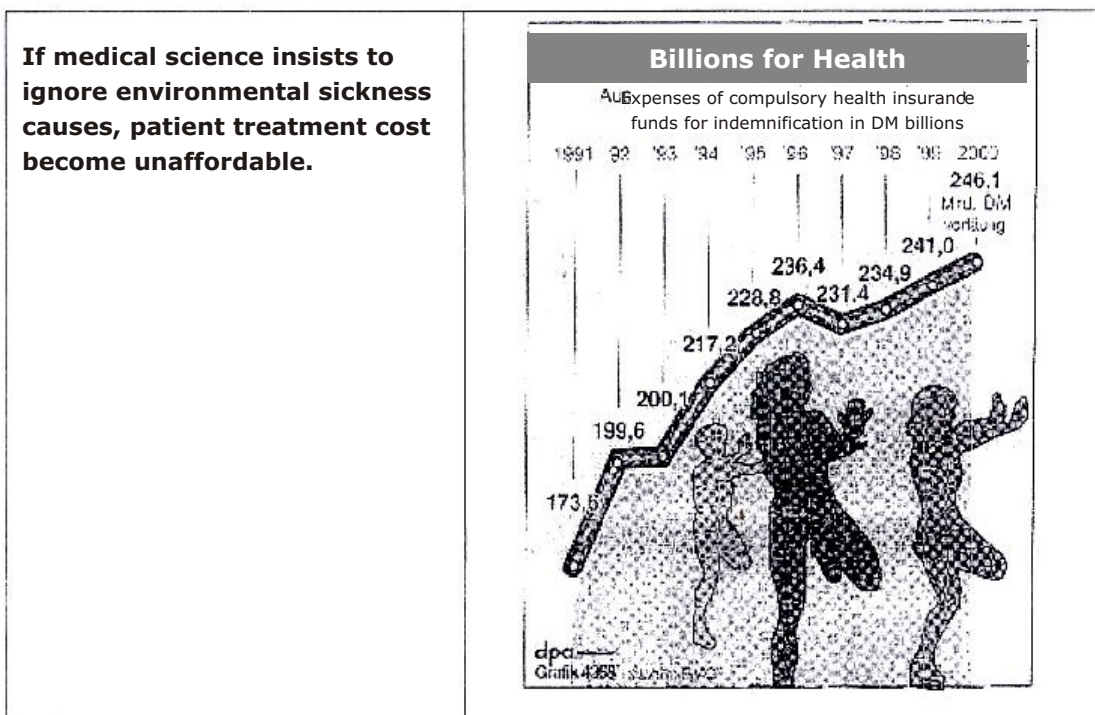

Praxisstudie: "Ortsabhängige und technische Strahlung als Ursache für chronisch therapie-resistente Krankheiten" from Dr. med. Kessler and medical practitioner Kopschina, awarded with the research prize of the German alternative medical practitioners' foundation. Include a nominal fee of €3.50 in postage stamps

Praxisstudie: "Tinnitus und Störzonen" from Hanspeter Kobbe
 Include a nominal fee of €2.50 in postage stamps

Both studies are published in German language and available from:
 Institute for Geopathology and Electromog, Ententeich 25, 29225 Celle
 Tel.: +49-5141-330280

Did you know?

- Estimations from experts indicate that approximately 70% of the population is affected by geopathic fields, without being aware of it.
- Studies reveal that, without exception, all patients with chronic disorders show evidence of exposure to electrical or geopathological disturbance fields. Included among these groups are cancer patients.
- Since this is not accounted for in doctor's examinations, the causes are neither identified nor eliminated, illnesses remain chronic. The consequences: Under this stress, the health system is no longer financially affordable, and it resorts to unsuitable measures at the cost of the patient; keyword "health reform".

How can you protect yourself?

- The best protection is prevention. Initial symptoms must be taken serious. If illnesses are already acute, it is necessary to immediately perform a site examination and if required reorganization measures, and also special natural medicine therapeutic measures where appropriate.
- Through a site examination geopathic zones and electromagnetic radiation can be located and removed. Optically disturbing changes in the rooms are in general no longer necessary today, depending on the individual circumstances.
- Approved shielding material **against earth radiation** with notarized proof of effectiveness is available, so that a repositioning of beds can be avoided. Radiation reflection occur when metal objects, mirrors, metal foil, guttering, satellite antennae, street lights etc. are situated on disturbance zones. Shielding measures that are limited to shielding under the bed are in general useless in the case of radiation reflection. Geopathologists always have to take into account these radiation reflections in an examination.
- There are also good shielding materials **against electrosmog** available. Requirements for a restoration however, always include the analysis of the problem by using suitable measurement technique and the clarification of whether the problem is caused by power lines, electrical devices or transmitter radiation.
- As a result of their education, geopathologists are equipped to make a well-grounded examination, counseling and for restoration.
- The cost of a site analysis is low in relation to the severe health damage that can be caused by electrosmog and geopathological zones.
